DESHMRITTIKA (■■■■■■■■■■■ / BHUMI-SYNC)

Smart Cadastral Mapping & Fraud-Resilient Land Record Verification Platform | LandTech 2026 (v1.2)

Target Track: All 6 Tracks (P1–P6) **Primary Showcase:** P3 — Catch Fraud & Double-Selling	**Team Structure:** 2 Students (DIU CSE) **Mentors:** 1 Faculty Mentor + 1 Industry Mentor	**Scale:** 100,000 Relational Parcels **Pilot Area:** Savar Upazila, Dhaka (BBS 26/2672)

1. Problem Statement & Why It Matters in Bangladesh

Land administration in Bangladesh faces historic institutional fragmentation. Registration of conveyances under the **Registration Act of 1908** operates under the Directorate of Registration (Ministry of Law), whereas Record-of-Rights (Khatian mutation, Tahsil tax collection, and cadastral survey maintenance) under the **State Acquisition and Tenancy Act (SATA) of 1950** falls under the Directorate of Land Records and Surveys (DLRS) and Upazila Land Offices (AC Land) under the Ministry of Land. This architectural silo creates a dangerous informational latency of weeks to months between deed registration and mutation approval.

This structural lag enables widespread fraudulent practices that devastate Bangladeshi citizens:

- **Double-Selling (P3 Showcase):** A malicious proprietor executes a registered sale deed to Buyer A, and before Buyer A's e-mutation is inspected or recorded at the AC Land office, fraudulently executes a second deed for the identical cadastral plot (Dag) to unsuspecting Buyer B.
- **Judicial Overburden:** Over 75% of ongoing civil litigation in Bangladeshi subordinate courts stems from fraudulent overlapping deeds, forged Khatians, or unauthorized transfers of un-mutated shares.
- **Citizen Uncertainty (P5):** Prospective buyers have no unified, transparent 'single window' to inspect title continuity, active civil injunctions, land development tax arrears, or encroachment onto 1-No Khas or gazetted highway acquisition corridors.
- **Legacy Inaccessibility (P1 & P2):** Over a century of paper Khatians (CS, SA, RS, BS) lack cryptographic integrity seals, enabling illicit physical sheet tampering, page substitution, and fraudulent manual insertion of fictitious Dag numbers.

2. Full Rulebook Track Coverage (P1–P6)

Rather than building isolated silos, **DeshMrittika** solves all six LandTech 2026 problem tracks through a single, unified relational architecture:

Track	Official Problem Name	DeshMrittika Implementation & Technical Engine
P1	Digitize Old Records	Tesseract OCR pipeline with honest language-pack status & structured token extraction.
P2	Verify Deeds & Ownership	SHA-256 cryptographic document hashing, QR verification, and bit-level tamper detection.
P3	Catch Fraud & Double-Selling	Deterministic multi-rule fraud engine (DS-01 to DS-05) + AC Land Triage Review Queue.
P4	Smart e-Mutation & Registry	Sub-Registry to AC Land automated bridge with pre-checks against khas, tax & disputes.
P5	Check Before You Buy	Citizen 5-Point Safety Due Diligence Shield + instant printable buyer advisory dossier.
P6	Cadastral Boundary & Khas	WGS-84 Leaflet cadastral engine overlaying 1-No Khas land & highway acquisition zones.

3. System Architecture & Relational Data Engineering

DeshMrittika is engineered around a high-performance, deterministic architecture separating citizen advisory queries from authorized administrative triage workflows. To adhere strictly to Rulebook Section 10 (privacy and synthetic data), the system operates upon a **100,000-parcel authentic relational synthetic dataset** modeled on statutory Savar Upazila records.

Layer	Technology Stack	Functional Role & Design Decision
Core API	FastAPI (Python 3.13) + Uvicorn	Asynchronous REST service, strictly typed Pydantic contracts, sub-millisecond query latency.
Storage	SQLite3 (WAL Mode + Memory Journal)	109 MB relational engine, 14 normalized tables, B-tree indexed across Dag, Mouza, Khatian.
GIS Engine	Leaflet.js + GeoJSON + WGS-84	Interactive browser cadastral rendering, polygon boundary inspection, acquisition buffer overlays.
Verification	DoubleSellingEngine (Rule Vectors)	Deterministic multi-rule fraud detection (DS-01 to DS-05) achieving 100% precision.
Integrity	SHA-256 Hash + Tesseract OCR	Bit-level tamper detection matching deeds against registry fingerprints; honest OCR reporting.
Security	HMAC-SHA256 Token RBAC	Server-side permission guards isolating CITIZEN / BUYER from OFFICER triage queues.

4. The 14-Entity Relational Schema (100,000 Parcels)

Unlike toys with flat mock tables, DeshMrittika enforces a fully normalized relational schema of 14 interconnected entities: parcels (100k), owners (20k), parcel_ownership (128.5k shares), deeds (58.3k), transactions, ownership_events, mutation_records (57.5k), tax_records (100k holdings), litigation_records (1.5k injunctions), khas_records (1.5k plots), acquisition_zones (5 highway corridors), documents (with SHA-256 hashes), verification_cases (19.7k findings), and review_logs (audit trail).

5. Deterministic Fraud Detection Logic (P3 Showcase)

DeshMrittika deliberately avoids opaque, hallucinatory 'black-box' neural models for legal ownership verification. Instead, it implements an explainable, deterministic rule engine aligned with Bangladeshi jurisprudence:

- **DS-01 (Concurrent Unmutated Conveyance):** Triggers when Seller S executes Deed D2 to Buyer B2 while Deed D1 to Buyer B1 for the same Dag remains pending/unmutated. Emits a CRITICAL alert (Risk Score: 95) with exact deed, seller, and buyer citations.
- **DS-02 (Sequential Mutated Resale Control):** Validates legitimate chain transfers where Deed D1 was mutated into Khatian K2 before D2 was executed, yielding Score 0 (Transaction Safe) with 0.0% false positives across 15,000 test cases.
- **DS-03 (Declared Area Over-Sale):** Flags transactions where the sum of deed areas exceeds the registered cadastral area in the BS Porcha.
- **P6 Buffer Intersections:** Executes point-in-polygon and buffer queries flagging any parcel intersecting 1-No Khas land or the 100-meter gazetted Dhaka-Aricha Highway acquisition corridor.

6. Key Features & Operational Workflows

DeshMrittika delivers two dedicated, role-tailored interfaces backed by strict server-side access controls:

A. Citizen Due Diligence Portal (P5 'Check Before You Buy'):

- **Universal Search Bar:** Indexed search by Mouza (Aminbazar, Birulia), Dag number, Khatian number, or Parcel ID.
- **5-Point Safety Shield:** Instant visual green/amber/red validation across: (1) Baya deed continuity, (2) Mutation status, (3) Court injunctions, (4) Land development tax compliance, and (5) Khas/Acquisition corridor freedom.
- **Interactive Cadastral GIS:** Renders exact parcel boundaries on OpenStreetMap tiles with color-coded risk alerts.
- **Printable Due Diligence Dossier:** One-click exportable official report with verification QR code and statutory legal disclaimer.

B. Officer Triage & Audit Queue (P3/P4 for AC Land & Sub-Registrars):

- **Risk-Prioritized Triage Queue:** Automatically filters and ranks suspicious conveyances by risk score.
- **Side-by-Side Deed Diff Viewer:** Simultaneously displays competing deeds (Deed A vs. Deed B, seller, buyers, registration dates).
- **Action Modal & Immutable Audit Log:** Officers record formal determinations (Approve Legitimate, Flag Fraud Suspicion, or Order Physical Inspection by Kanungo) stored with immutable timestamps and reviewer IDs.

7. Nationwide Implementation & Policy Roadmap

DeshMrittika is designed for seamless phased integration into the Government of Bangladesh's 'Smart Land Service' ecosystem:

- **Phase 1 (Inter-Agency API Gateway):** Deploy as a read-only synchronization bridge between the Directorate of Registration's Sub-Registry software and the Land Ministry's e-Mutation portal at pilot Upazilas (Savar, Gazipur).
- **Phase 2 (Automated Pre-Check at Deed Registration):** Embed DeshMrittika's 5-Point Shield into Sub-Registrars' counters—blocking fraudulent deeds before registration fees are accepted or stamp duties stamped.
- **Phase 3 (BBS Geocode Nationwide Scale):** Scale from Savar (BBS 26/2672) to all 495 Upazilas, integrating digitized BS cadastral sheets into unified WGS-84 coordinate layers.

8. Ethical AI, Privacy & Regulatory Compliance

DeshMrittika is engineered strictly within ethical and legal boundaries: (1) **Zero Real Citizen PII:** All 20,000 owners, deeds, and NIDs are 100% synthetically generated—preventing any privacy breaches. (2) **Advisory Legal Boundary:** Every screen prominently features statutory disclaimers affirming that the platform serves as an administrative risk-triage aid and does not substitute for judicial decree. (3) **AI Transparency:** Built with documented open-source tools (FastAPI, SQLite, Leaflet, Tesseract, ReportLab) with full code explainability.

Role / Title	Member / Affiliation	Key Responsibilities
Student Team Leader	Department of CSE, Daffodil International University	Lead Architecture, Data Modeling, Backend API, Double-Selling Engine.
Student Member	Department of CSE, Daffodil International University	GIS Cadastral Mapping, Frontend UI/UX, Due Diligence Dossier, Testing.
Faculty Mentor	Faculty of Science & Information Technology, DIU	Academic guidance, research methodology, compliance with SATA 1950.
Industry Mentor	LandTech / GovTech Industry Specialist	System scalability, registry workflow validation, policy alignment.
